Fresh thinking in sanitisation

Pet odours can be a stubborn problem in the home, ingrained in carpets, fabric, and furniture. Chemical cleansers can be used, but often cause unpleasant odours and are frequently merely masking the cause of the problem.

The solution needs to be quick, effective, and affordable. Ozone eliminates odours by reacting at a molecular level, reacting with and destroying them. After treatment ozone naturally returns to oxygen, leaving no perfumed or chemical smell. Only fresh air remains.

Ozone will reach through the entirety of the room and so is also effective in cleansing areas which are physically difficult to clean, as well as bedding, carpets, soft furnishings, fabric, and curtains.

## Possible uses include:

- Removal of Pet Odours and pet dander (allergen) from the Home
- Sanitisation of Veterinary Facilities including eradication of Parvo virus
- Ozone will kill flea larvae and can be used along with flea treatments which will kill the fleas to break the cycle of infestation

Biofresh ozone generators are simple, quick, and easy to use, requiring no chemical refills, meaning that they have minimal running costs.

## Suggested Applications:

### Ozone Plug-in

This unit is perfect to use within a domestic environment it will control pet odours without the need for the use of fragrance and chemicals which can be harmful to your pet.

### Cubo3

These ozone generators are light and portable and will reach levels of sanitisation required to eradicate odours, bacteria and most viruses.
