

Schools, Nursery & Day Care

Fresh thinking in sanitisation

Keeping children safe and healthy is one of the most important priorities of child care providers. Whether children are in school or day care centres, providers are responsible for ensuring safety in their child care setting.

Maintaining a clean child care environment is one of the best ways to help ensure that children stay safe and healthy.

Dirty toys, soft furnishings, eating utensils, and surfaces can carry and spread germs. Regular disinfecting is essential in a child care setting.

The solution needs to be quick, effective, and affordable. Ozone is effective in killing bacteria and viruses that lead to problems such as MRSA, Norovirus, and E-Coli, as well as eliminating odours such as body odour, urine, and sickness by reacting with and destroying them.

After treatment ozone naturally returns to oxygen, leaving no perfumed or chemical smell. Only fresh air remains.

Ozone will reach through the entirety of the room and so is also effective in sanitising areas which are physically difficult to clean.

Possible uses include:

- Sanitisation of Rooms
- Bacteria and Odour Control in Toilets and Bathrooms
- Sanitisation of Kitchens
- Sanitisation and odour removal of Waste Areas

Biofresh ozone generators are simple, quick, and easy to use, requiring no chemical refills, meaning that they have minimal running costs.

Suggested Applications:

Cubo3

These ozone generators are light and portable. Both models come with inbuilt timers so that cleaning staff can get on with their work and come back to the classroom finding it ready to be reoccupied.

Pro 16

Used to sanitise and remove odours within larger areas such as gyms and dinner halls.
